

Do you have a lab for blood testing, etc?

Yes, we have our own in-house lab for blood work, urine and fecal analysis. We can also test for Parvo, Heartworm & Feline Leukemia FeLV. Copies of the results of any tests are provided to you, for review by your primary care veterinarian. We can provide you with a complete health profile in less than an hour, depending on the clotting factor of your pets blood sample. Our Doctor will go over the test results with you, and explain the results. What the results indicate and answer any questions you might have.
